## Program Overview

Horticulture is defined as the “art and science of garden cultivation and management”. In the purest sense, being a Horticulturist means being an expert on growing and caring for plants of various types and species. However, in the modern horticulture profession, it often takes additional technical skills to successfully grow, design, install, and maintain plants and landscapes.

## PROGRAM REQUIREMENTS

### A.A.S., Major in Horticulture Technology

The Associate in Applied Science–Major in Horticulture Technology prepares students for supervisory, middle management and technical positions in horticulture.

Students will learn the scientific principles and practices of plant growth and development, soils, and pest and pathogen control. Additionally, students will gain substantial hands-on experience operating the latest tools, equipment, and technologies used in the horticulture industry by participating in laboratory activities and field trips.

Graduates of the two-year Horticulture Technology major may pursue supervisory, middle management or technical careers in garden centers, nurseries, greenhouses, landscape operations, golf courses, athletic fields, lawn care companies, tree care companies, and public and private gardens.
